

SQUIRL OS — Intellectual Property Protection & Licensing Doctrine

The Final Capstone Document

Effective Date: September 18, 2026

Author & Rights Holder: Leon Calvin Long II

Commercial Licensee: SquirIOS Technologies LLC

Status: Controlling document — supersedes all prior IP-summary language in scattered materials. Where any other document conflicts with this one, this document governs.

1. Ownership & Control — Both Sides, Fully Protected

Side A — The Inventor (Personal):

All intellectual property in the SQUIRL OS ecosystem — every patent application, every provisional, every method, every template, every recipe — is owned **solely and entirely by Leon Calvin Long II**, filed in his personal name. This is deliberate doctrine: patents are filed in the inventor's personal capacity, exactly as the United States Patent and Trademark Office records them. No filing, license, sale, or partnership transfers, dilutes, or encumbers that ownership.

Side B — The Company (Commercial):

SquirIOS Technologies LLC holds an **exclusive commercial license** to market, distribute, sublicense, and sell USE of the IP. The LLC may grant customers use rights at any tier. The LLC may never sell, assign, or transfer ownership of the underlying IP. This structure protects both sides permanently: the inventor cannot lose the IP through company debt, dissolution, or dispute; the company cannot be blocked from commercializing it.

Both sides rest on one rule:

Ownership stays with the inventor. Use rights flow through the company. Neither side can be separated from its protection by the actions of the other.

2. The Portfolio — What Is Actually Filed (Receipts, Not Claims)

Every item below is backed by a USPTO receipt. Nothing on this list is aspirational.

Patents Pending — 8 Provisional Applications

#	Application	Title / Subject	Filing Date (USPTO Receipt)
1	64/081,490	Gas-Free Off-Chain Asset Transfer with Cryptographic Solvency Verification	June 3, 2026
2	64/081,911	Universal File Reconstruction via Topological Geometric Calculus	June 3, 2026
3	64/082,606	Cross-Ledger Data State Anchoring with Bitcoin Ordinals	June 4, 2026
4	64/094,360	Universal Rail to ISO 20022 Interoperability Bridge	June 19, 2026
5	64/114,746	Universal Adaptive Intelligence Orchestration	July 18, 2026

6	64/119,191	Deterministically Governed Probabilistic Neural Computation	July 25, 2026
7	64/145,825	Self-Healing AI Infrastructure with Chaos-Trained Neural Mesh	September 1, 2026
8	64/157,915	Deterministic Constitutional Autonomous Infrastructure Systems and Methods	September 18, 2026

Application 64/157,915 (Patent Center #81949126, Confirmation #1786) carries the core of the ecosystem in a single linked inventive concept: the Deterministic Runtime Pipeline (Claims 1-5) and the Method of Construction and Operation of Constitutional Autonomous Infrastructure (Claim 6).

SBIR Tracks — 5

Active across NIST (AI RMF + PQC), NSF (neural mesh), DOE (cybersecurity), and DoD (autonomous systems) — non-dilutive funding tracks tied to the same underlying IP.

Prior-Art Shield

An earlier published application (19/693,343) is retained **as published prior art only** — a conception-date shield for the pending provisionals. It is not counted in the portfolio and is cited only where prior-art value requires it.

Canonical public count: 8 patents pending + 5 SBIR tracks. Never more, never less, never "patent pending" on an unfiled concept.

3. The Evidence Chain — What Backs Every Claim in This Document

The strength of this doctrine is that it does not ask to be believed. It points to receipts:

1. **USPTO receipts** — every provisional in Section 2 has a Patent Center filing receipt with application number, date, and confirmation number.
2. **Published prior art** — the Jasper Runtime Recipe Book (DRRB-SPEC-1-0-0, published September 12, 2026) and the DCAI Specification (Zenodo DOI: 10.5281/zenodo.22837417, published September 18, 2026), each timestamped and immutable.
3. **The public ledger** — github.com/LLong2026/squirrel-os-lindy-test carries the live, timestamped development and testing record (Lindy 30-day test ledger, verification-ladder specs, benchmark records, filed specifications).
4. **Actual reduction to practice** — beyond constructive filing dates, the working system's healing-event audit trail, repair manuals, and daily operation records demonstrate the inventions running in production. This is reduction to practice in fact, not on paper.
5. **Canonical company documents** — `SQUIRL_RESEARCH_CORE_COMPANY_DOCUMENTS.md` (public) and this document together form the complete IP posture.

Disclosure doctrine: the ecosystem operates open-book with receipts first — conception evidence published, then filings receipted, then claims stated. Claims never outrun the ledger.

4. Protected Assets — The Immutable Templates

The following are patent-protected reference implementations. They are distributed under license but are **never modified, customized, or re-versioned for or by any customer**:

- The 15-entity reference schema (system telemetry, healing, orchestration, learning)

- The 11 core healing playbook definitions
- The 31-node neural mesh topology (5 layers, expandable)
- The 4 seed skills
- The Deterministic Runtime Pipeline and CAI construction method (64/157,915)
- The bifurcated governance model (probabilistic mesh proposes, deterministic layer validates)

Customer-specific customization of core templates is out of scope and will be refused. Surface-level rebranding IS permitted (Section 5).

5. Licensing Terms — Use Rights, Never Ownership

All tiers grant **USE rights only**. Patent ownership remains with Leon Calvin Long II / SQUIRL OS Technologies at every tier, forever.

- **Free tier** — healing playbooks + heartbeat monitoring.
- **Licensed tier** — one-time purchase; full stack, 402 playbooks, 4 platform adapters, Constitution compliance, STRIDE security model. Grants use of the licensed patents pending + SBIR tracks — NOT ownership transfer.
- **SaaS tier** — hosted hub under subscription; same IP boundaries.

Rebranding (buyer-side): buyers and licensees may white-label the surface — names, logos, colors, domain. Rebranding grants surface USE rights only. Governance, constitutional constraints, deterministic validation, and this doctrine remain untouched beneath any skin.

Prohibited at every tier: ownership claims, patent-ownership transfer, source redistribution as one's own, removal or softening of the disclaimer below, customization of Section 4 protected assets.

6. THE DISCLAIMER — Mandatory, Verbatim, Every Surface

This software is a prototype and is provided for educational and research purposes only. It is not intended for production use, commercial deployment, or safety-critical environments. All systems are experimental and may contain defects on them.

This disclaimer appears on every app, every repository README, every template listing, every customer-facing surface, and every outbound communication. It is a condition of every license. It may never be removed or softened without the explicit written approval of Leon Calvin Long II. It works together with the receipts above: the world may examine the published evidence freely, and no one may mistake examination-grade software for a warranted product.

7. Briefing — The Whole Posture in Plain Language

What this document does: It is the single controlling statement of who owns the SQUIRL OS intellectual property (Leon Calvin Long II, personally), who may commercialize it (SquirIOS Technologies LLC, exclusively), what exactly is filed and receipted (8 provisionals + 5 SBIR tracks, each with a USPTO receipt), what is immutable (the protected templates), what buyers get (use rights, rebranding allowed, ownership never), and what everyone must see (the prototype disclaimer).

Why both sides are protected: The inventor holds the patents personally, so no company event — debt, dissolution, dispute — can touch them. The company holds an exclusive commercial license, so no personal event can block business. Every customer transaction downstream grants use rights only, so neither side can be eroded by growth.

Why it holds up: Every assertion in this document is backed by a receipt — a USPTO filing record, a timestamped Zenodo DOI, a public GitHub ledger, or an immutable audit trail. The portfolio is pending (provisional), and the doctrine says so plainly; nothing here overstates. The recipes are published, the method is claimed, the system demonstrably runs, and the paper trail proves it in order: **receipt first, then the claim.**
